

AUTOMATIC SPRAY VACCINATOR TYPE IB 1/2/3

This machine is designed for any type of birds for vaccination by spray : I.B (Infectious Bronchitis), Newcastle disease, etc. It is adapted to all types of boxes. Lateral guides are adjustable to the dimensions of the boxes. The vaccine is sprayed onto the birds in the form of tiny droplets by the intermediary of a special diffuser.

THE MACHINE INCLUDES :

- IB1 :** - The spray system
- A stand on wheels
- IB2 :** - The spray system
- An infeed and
outfeed conveyor
- IB3 :** - The spray system
(vaccinating cycle
regulated by the
counting head).

▲ AUTOMATIC VACCINATOR ON CONVEYOR TYPE IB2

THE SPRAYING SYSTEM INCLUDES :

- Vaccine reserve container : capacity 4 to 10 litres.
- Ramp of 2 or 4 nozzles in plastic spraying droplets of 100 to 150 microns at a pressure of 4 bars.
- Volumetric injector for precise vaccine dosing. This pneumatic piston guarantees an economic distribution of vaccine (adjustable volume of 0 to 40 ml).
- Cover adjustable in height with plastic curtains.
- Framework and support for all parts of the spraying system in stainless steel.
