

# EGINJECT INOVO INJECTION MACHINE

**THE MOST ADVANCED TECHNOLOGY**

**ADVANTAGES OF THE EGINJECT**

**Dual speed** injection technology combined with a single needle system allowing a quick perforation of the shell without cracking the shell

**100 % enhanced livability** of the embryo, with the original embryo shell technology, protecting embryo from needle damage.

**Robust and friendly « touch screen »** system with full control of each and all functions of the machine

Full **vaccine savings** system: unique to the Eginject, allowing the utilization of virtually 100% of the vaccine even with small size flocks and repeated interruptions

Individual **Dose setting** system allowing injection of vaccine & other substances at variable doses

**Contamination Control** Technology: the shell closing of the injection hole permits a quality injection in many different environments

**Excellent sanitation** conditions

Complete **disinfection** after every injection

**Clean efficient** inoculation process: Automated cleaning cycles

**Easy handling , cleaning and servicing**

Fully **washable** Equipment

**Mobile system**, can be used in any automated environment

**Service contract** with engineering support

**Capacity:**

30 000—65 000 eggs/hour

*Your Hatchery Automation*

**E-CAT**
