

# STACKING & DESTACKING SYSTEMS

## THE BEST SOLUTION FOR YOUR HATCHERY - TIME & LABOUR SAVINGS

The automatic stackers and destackers are designed to stack & destack trays and boxes

### 1- Full & empty hatcher tray de/restackers for egg trays & chick baskets

Designed to pick up 1,2,3,4 or 5 boxes/trays at one time, the machine can be used in Egg rooms for Destacking Empty hatcher trays or Stacking Full trays & in Chick Handling rooms for Destacking Empty hatcher trays or Stacking Full trays.

### 2- Full setter tray transfer between farm Trolleys & setter trolleys

The system is designed to stack or destack at high capacity & is suitable for in line handling of most types of boxes.

### 3- Automatic box Destackers & Restackers

The machine is designed to suit most types of boxes. The very simple design is carefree and the machine obtains a high capacity which once automated eliminates employee back problems and tedious lifting operations. The machine includes : infeed and outfeed conveyors, box gripping mechanism, one motor, mechanics, lateral guides and protective covers. The same machine can be adapted to stack or destack.

Capacity: Up to 1400 boxes/hour

### 4- Automatic setter tray Extractor & restacking systems

The machine is designed to extract setter trays one by one or two by two or four by four, enabling a high capacity in a function that is otherwise considered highly labour intensive. The re-stacking unit reloads empty setter trays in line. Each machine can economize an operator. The machine is adapted to suit most types of setter trolley

Capacity: 400- 450 setter trays/hour
